

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for administration of network financial transaction terminals, comprising:

sending an event query to a management instrumentation application by a queued component client on one of the financial transaction terminals;

subscribing to a pre-determined event type by the queued component client;

receiving an event notification from the management instrumentation application by the queued component client;

capturing and consuming an event message by the queued component client before writing the event message into an event log on said one of the financial transaction terminals;

sending ~~an~~ the captured and consumed event message to a server site event queue by the queued component client via message queuing services components;

removing the event message from the server site event queue by a queued component server; and

storing the event message into a database by the queued component server.

2. (Original) The method of claim 1, wherein sending the event query further comprises sending a log event type of event query to the management instrumentation application.

3. (Original) The method of claim 2, wherein sending the log event type of event query further comprises subscribing to the log event type by the queued component client.

4. (Original) The method of claim 1, wherein receiving the event notification further comprises receiving log event type of event notification by the queued component client.
5. (Original) The method of claim 4, wherein receiving the event notification further comprises receiving the event notification by the queued component client acting as an event consumer.
6. (Canceled)
7. (Canceled)
8. (Amended) The method of claim 7 1, wherein receiving the event notification further comprises placing the log event message in a client site event queue by the queued component client.
9. (Original) The method of claim 8, wherein receiving the event notification further comprises creating the client site event queue by the queued component client.
10. (Original) The method of claim 4, wherein receiving the event notification further comprises receiving the event notification by the queued component client from the management instrumentation application when a log event occurs.
11. (Original) The method of claim 1, wherein sending the event message further comprises sending a log event message in extensible markup language to the server site event queue by the queued component client.
12. (Original) The method of claim 11, wherein sending the log event message further comprises placing the log event message in a client site event queue by the queued component client.
13. (Original) The method of claim 12, wherein placing the log event message in the client site event queue further comprises creating the client site event queue by the queued component client

14. (Original) The method of claim 11, wherein sending the log event message further comprises sending the log event message to the server site event queue over a network.
15. (Original) The method of claim 14, wherein sending the log event message over the network further comprises sending the log event message to the server site event queue over a proprietary network.
16. (Original) The method of claim 14, wherein sending the log event message over the network further comprises sending the log event message to the server site event queue over a public network.
17. (Original) The method of claim 1, wherein removing the event message further comprises removing a log event message from the server site event queue by the queued component server.
18. (Original) The method of claim 17, wherein removing the log event message further comprises removing the log event message in extensible markup language format from the server site event queue by the queued component server.
19. (Original) The method of claim 18, wherein removing the log event message further comprises removing the log event message from the server site event queue by the queued component server acting as an event processor.
20. (Original) The method of claim 1, wherein storing the event message further comprises storing a log event message into the database by the queued component server.
21. (Original) The method of claim 20, wherein storing the log event message further comprises storing the log event message in extensible markup language format into the database by the queued component server.
22. (Original) The method of claim 21, wherein storing the log event message further comprises storing the log event message into a structured query language server data warehouse by the queued component server.

23. (Original) The method of claim 22, wherein storing the log event message further comprises analyzing the stored log event message.
24. (Original) The method of claim 23, wherein analyzing the stored log event message further comprises analyzing the stored log event message using an online analytical processing application.
25. (Original) The method of claim 1, further comprising allowing a user to query the database via a web browser user interface.
26. (Original) The method of claim 25, wherein allowing the user to query the database further comprises filtering query results based on selections entered by the user on the user interface.
27. (Original) The method of claim 26, wherein filtering the query results further comprises displaying a report of the filtered results for the user via the user interface.
28. (Original) The method of claim 1, further comprising sending a notice of a security related event as an event notification to a predefined terminal for a system administrator.
29. (Original) The method of claim 28, wherein sending the notice of the security related event further comprises detecting the security event by a filtering mechanism associated with the database.
30. (Currently Amended) A system for administration of network financial transaction terminals, comprising:

~~means~~ a queued component client on one of the financial transaction terminals adapted for sending an event query to a management instrumentation application ~~by a queued component client on said one of the financial transaction terminals;~~means, for subscribing to a pre-determined event type, for receiving an event notification from the management instrumentation application by the queued component client; for capturing and consuming an event message before writing the event message into an event log on

said one of the financial transaction terminals, means and for sending an the captured and consumed event message to a server site event queue by the queued component client via message queuing services components; and

means a queued component server adapted for removing the event message from the server site event queue by a queued component server; and means for storing the event message into a database by the queued component server.

31. (Currently Amended) The system of claim 30, wherein the ~~means for sending queued component client is~~ further ~~comprises means adapted~~ for sending log event type of event query to the management instrumentation application.

32. (Currently Amended) The system of claim 31, wherein the ~~means for sending the log event type of event query~~ queued component client is further ~~comprises means adapted~~ for subscribing to the log event type ~~by the queued component client.~~

33. (Currently Amended) The system of claim 30, wherein the ~~means for receiving the event notification~~ queued component client is further ~~comprises means adapted~~ for receiving a log event type of event notification ~~by the queued component client.~~

34. (Currently Amended) The system of claim 33, wherein the ~~means for receiving the event notification~~ queued component client is further ~~comprises means adapted~~ for receiving the event notification ~~by the queued component client~~ acting as an event consumer.

35. (Canceled)

36. (Canceled)

37. (Currently Amended) The system of claim ~~36~~ 30, wherein the ~~means for receiving the event notification~~ queued component client is further ~~comprises means adapted~~ for placing the log event message in a client site event queue ~~by the queued component client.~~

38. (Currently Amended) The system of claim 37, wherein the ~~means for receiving the event notification~~ queued component client is further ~~comprises means adapted~~ for creating the client site event queue ~~by the queued component client~~.
39. (Currently Amended) The system of claim 33, wherein the ~~means for receiving the event notification~~ queued component client is further ~~comprises means adapted~~ for receiving the event notification ~~by the queued component client~~ from the management instrumentation application when a log event occurs.
40. (Currently Amended) The system of claim 30, wherein the ~~means for sending the event message~~ queued component client is further ~~comprises means adapted~~ for sending a log event message in extensible markup language to the server site event queue ~~by the queued component client~~.
41. (Currently Amended) The system of claim 40, wherein the ~~means for sending the event message~~ queued component client is further ~~comprises means adapted~~ for placing the log event message in a client site event queue ~~by the queued component client~~.
42. (Currently Amended) The system of claim 41, wherein the ~~means for placing the log event message in the client site event queue~~ queued component client is further ~~comprises means adapted~~ for creating the client site event queue ~~by the queued component client~~.
43. (Currently Amended) The system of claim 40, wherein the ~~means for sending the log event message~~ queued component client is further ~~comprises means adapted~~ for sending the log event message to the server site event queue over a network.
44. (Currently Amended) The system of claim 43, wherein the ~~means for sending the log event message over the network~~ queued component client is further ~~comprises means adapted~~ for sending the log event message to the server site event queue over a proprietary network.

45. (Currently Amended) The system of claim 43, wherein the ~~means for sending the log event message over the network~~ queued component client is further ~~comprises means adapted~~ for sending the log event message to the server site event queue over a public network.

46. (Currently Amended) The system of claim 30, wherein the ~~means for removing the event message~~ queued component server is further ~~comprises means adapted~~ for removing a log event message from the server site event queue ~~by the queued component server~~.

47. (Currently Amended) The system of claim 46, wherein the ~~means for removing the log event message~~ queued component server is further ~~comprises means adapted~~ for removing the log event message in extensible markup language format from the server site event queue ~~by the queued component server~~.

48. (Currently Amended) The system of claim 47, wherein the ~~means for removing the log event message~~ queued component server is further ~~comprises means adapted~~ for removing the log event message from the server site event queue ~~by the queued component server~~ acting as an event processor.

49. (Currently Amended) The system of claim 30, wherein the ~~means for storing the event message~~ queued component server is further ~~comprises means adapted~~ for storing a log event message into the database ~~by the queued component server~~.

50. (Currently Amended) The system of claim 49, wherein the ~~means for storing the event message~~ queued component server is further ~~comprises means adapted~~ for storing the log event message in extensible markup language format into the database ~~by the queued component server~~.

51. (Currently Amended) The system of claim 50, wherein the ~~means for storing the log event message~~ queued component server is further ~~comprises means adapted~~ for storing the log event message into a structured query language server data warehouse ~~by the queued component server~~.

52. (Currently Amended) The system of claim 51, ~~wherein the means for storing the log event message~~ further comprises comprising means for analyzing the stored log event message.

53. (Currently Amended) The system of claim 52, wherein the means for analyzing the stored log event message further comprises ~~means for analyzing the stored log event message using an online analytical processing application.~~

54. (Original) The system of claim 30, further comprising means for allowing a user to query the database via a web browser user interface.

55. (Original) The system of claim 54, wherein the means for allowing the user to query the database further comprises means for filtering query results based on selections entered by the user on the user interface.

56. (Original) The system of claim 55, wherein the means for filtering the query results further comprises means for displaying a report of the filtered results for the user via the user interface.

57. (Original) The method of claim 30, further comprising means for sending a notice of a security related event as an event notification to a predefined terminal for a system administrator.

58. (Currently Amended) The method of claim 57, wherein the means for sending the notice of the security related event further comprises means a filtering mechanism associated with the database for detecting the security event ~~by a filtering mechanism associated with the database.~~
